EDUCATION

The University of Texas at Austin

Fall 2013 - Spring 2017 | 3.10 GPA

Major-Relevant Coursework

*Introduction to Programming, Data Structures,
Discrete Mathematics, Linear Algebra,
Introduction to Probability and Statistics,
Computer Architecture, Operating Systems,
PHP and SQL, Compilers, Computer Networks,
Algorithms and Complexity, Intro to Wireless Networks,
Computational Brain*

Business Foundations Program (BFP) Coursework

Foundations of Accounting

Foundations of Finance

Foundations of IT Management

Foundations of Business Law and Ethics

Foundations of Management and Organization Behavior

Foundations of Marketing

SKILLS

Proficient

Java, JavaScript, C

Experienced

HTML, CSS, C++, Python

Used

PHP, Angular, Node, React, Express, Vue,
MySQL

Technologies

Git, Linux, Windows, Atom, VS Code, Visual
Studio, Heroku, Github, Photoshop, Microsoft
Office Suite, JSON, Grunt, Gulp, Webpack,
Babel

PROJECTS

Personal Website (HTML, CSS)

Created a personal website using HTML and CSS from scratch to showcase my resume, relevant contact links, github, and other career-relevant information for recruiters and hiring managers. Website is hosted on Github pages.

Auction Website (HTML, CSS, PHP, MySQL)

Class project aimed to simulate a real client website design workflow, with simulated client interaction and feedback in between sprints. Front end was built using HTML and CSS. Back end was built using MySQL and PHP. Website was hosted on an Apache server on UT servers.

Pascal Compiler (C)

Project for Compilers class. Compiles a limited subset of the Pascal codebase. Implemented part of a lexical analyzer, parser, and code generator. Several tools were used in the process including: YACC/Bison and Lex.

Discord Bot (Python)

Created a python-based bot that interacts with users in a discord group. The bot periodically makes an API call to a REST API, parses the JSON data, and allows users to make queries on that data. Additionally, the bot also has other commands that users can call. The bot is hosted on Heroku and is designed to be running 24/7, with periodic restarts every 24 hours.

Please check my github for other projects.
